## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of the Species of figure 25 in the reply filed on 12/20/05 and during the telephone interview on 2/17/05 is acknowledged. During the telephone interview applicant was reminded that only one species could be elected.

Claims 1-6, 9-13 and 14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/20/05. Claims 1-6, 9-12 and 14 contain limitations that are not included in the elected species.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7, 8 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Brenneman (USPN 5,466,220). Brenneman teaches a housing (12,30,40,64), a port (24), a delivery device in the shape of a pen (60), and a support surface (10). See figure 1. Method steps include inserting the container, transferring a volume of fluid, and separating the delivery device from the housing. The delivery device is considered a pen injector since the syringe has a length similar to a pen and is held in the hand like a pen.

Art Unit: 3763

Claims 7,8 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Haber et al (USPN 5,329,976). Haber teaches a housing (16), a port (87), a delivery device in the shape of a pen (8), and a support surface (22). See figures 1-2. Method steps include inserting the container, transferring a volume of fluid, and separating the delivery device from the housing. The delivery device is considered a pen injector since the syringe has a length similar to a pen and is held in the hand like a pen.
